

## Virtualization

### Why (and how to) easily create additional computers without buying any.

The computer world of the personal user as much as the corporate user has become increasingly vulnerable to invasion and malware attacks (Yahoo!, AOL, Equifax, Macy's, Target, KRACK, ransomware, etc.). Is there a strategy to mitigate and recover from those adverse conditions?

WPCUG President Pierre Darmon will explain how to create that second (or third or fourth) computer inside your existing one, and how that strategy benefits you.

This simple, powerful concept is called virtualization.

### THE WEB SHOW *by George Hammer*

The Web Show workshop is oriented toward examining interesting, entertaining, and informative websites. We will look at websites about health, finance, productivity, collaboration, social media, selling on the web, and such exotic topics as Bitcoin and the dark web. We intend to be responsive to our attendees so future subjects will evolve as attendees make their interests known. We will explore the web together.

Topics for each month can be found at the [workshop blog](#). Directions to meeting location are found [here](#).
