

## Wolfram Alpha

Computational knowledge engine Wolfram Alpha will be demonstrated by our Michael Metz in a presentation at this month's General Meeting.

While Google sorts relevant articles and videos, Wolfram Alpha is great at assembling factual knowledge into a user friendly and interactive report, unlike Google's results. This is extremely helpful for searches in a wide array of subjects on science, math, sports, finance, geography, history, food, and many more. The basic version of the Wolfram Alpha search engine is free for personal noncommercial use.

WPCUG member Michael Metz has a background as an optical physicist, holographer, entrepreneur, computer consultant, teacher, trainer, software developer, and medical device quality systems expert. He is also an accomplished acoustic folk guitarist and musician. Mike volunteers as a community ambassador for Wolfram Research.
