

'WiFi radio' as a range-extender

Need to share an Internet-like connection across two or more sites or buildings? A solution is "WiFi radio," which tech guru Rob Caluori will explain and explore at the March 7 General Meeting. WiFi radio has greater range than ordinary WiFi. It unleashes the potential of WiFi to go beyond your four walls, beam a WiFi signal on the other side of your property for that security camera or shed, and even can connect directly across buildings without using the internet (useful in an emergency!).

Rob Caluori has worked in the Westchester Library System since 2007 where he currently serves as the director of information technology. He brings experience from various areas of IT from working in the medical, financial, and library industries. He's a member of local HAM radio club Westchester Emerg Comm Assn (WECA.org). Rob holds M.S. degrees from Pace University in Information Systems and SUNY Albany in Information Science as well as a B.S. degree in Information Systems from Mercy College.

WPCUG ELECTIONS AND CONSTITUTION

Club bylaws require that there be a rotation of board members to ensure a constant flow of new ideas. Two directors are going off the board at the next election, which will be held during the General Meeting on March 7, 2019. Plan to attend and to vote as the election is another way to express yourself and your thoughts about the club.

Please see Pierre's column, "President's Message," on page 4 for information and a link to the proposed amended constitution.
